

REMARKS

Support for the amendment to claim 25 is found in the instant specification at column 1, lines 44-55. The claim as originally submitted reversed the functions of the first and second oscillatory frequency regulating circuits and clearly this was a mistake, as the cited specification states that the first local frequency is adjusted and this fixes the second local frequency.

The Examiner further indicated that a supplemental reissue oath was necessary and the Examiner's suggested language has been adopted.

Applicant now considers this case in condition for allowance and an early notice thereof is respectfully requested.

Respectfully submitted,

Donald C. Casey

**VERSION WITH MARKINGS TO SHOW CHANGES MADE**

25. (Three times amended) The receiver of claim 20 wherein said external and internal dual adjustable oscillatory frequency regulating circuit provides a local oscillatory frequency that can be broadly adjusted without a conventional SAW and which [fixes] adjusts a first local oscillatory frequency and [adjusts] fixes a second oscillatory frequency.
